## Current perspectives on global sugar consumption: definitions, recommendations, population intakes, challenges and future direction – CORRIGENDUM

The published paper contained some errors: please see below for details and the correct information.

- 1) In the results section on p6, '*Adults (19–64 yrs)*', the first sentence of the second paragraph currently reads: "Total sugars intake (%TE) ranged from 12.7% in 35–49 year old men and women in Lithuania to 26% in 19–30 year old women in The Netherlands."

The correct text is: "Total sugars intake (%TE) ranged from 12.7% in 35–49 year old men and women in Lithuania to 24% in 15–80 year old women in Germany."

- 2) In Table 6:

Data relating to The Netherlands was incorrectly reported as "Total sugars (%E) for men (19–30y) as 25.8 and for women 26.0"

The correct values are **21.0 for men** and **22.1 for women**.

- 3) Tables 3–7: For France and Mexico, where n numbers are stated only for males or females, the number stated is the combined n number for males and females.

Table 7: For Greece, the n numbers stated are for all age groups combined (35–44, 45–54, 55–64 y).

- 4) Several rows of data on Table 6 relating to sugar intakes in New Zealand and Spain are misaligned in the print version and are correct in the second table outlined here:

**Table 6.** Energy and sugars intake of adults (19–64 years)

Country	Assessment year	Age range (y)	n	Method	Energy		Total sugars				Added sugars				Sucrose				Free sugars			
					MJ	SD	g	SD	%E	SD	g	SD	%E	SD	g	SD	%E	SD	g	SD	%E	SD
